

Baling and Compacting Work Picture This

BALERS VS. COMPACTORS

HOW THEY WORK

Both balers and compactors work in the same way:

STEP 1

Waste is fed into the machine.

STEP 2

When the waste reaches a certain level, it is compressed into a smaller size.

STEP 3

This compressed waste is bound or packaged into a uniform block.

However, balers and compactors are used for different types of waste.
