# HOW TO USE WHEEL CHOCKS WHEN LIFTING A VEHICLE

**MYTEE**  
PRODUCTS

## 1. GET THE RIGHT CHOCKS FOR THE JOB.

Don't try to improvise a chock using random materials you have on hand. Make sure you have enough chocks to secure all potentially-unstable wheels.

## 2. PUT THE CAR, TRUCK, OR MOTORCYCLE INTO PARK.

If at all possible, parking on a flat surface is best. If you're on a loading dock, park as close to the dock as possible.

## 3. WEDGE THE CHOCKS UNDER THE BACKS OF THE WHEELS THAT ARE FURTHEST FROM THE SIDE YOU'RE LIFTING.

Kick or lever the chock firmly under the wheel

## 4. PLACE ADDITIONAL CHOCKS ON THE FRONTS OF THE WHEELS

These additional chocks for the wheels on the axle you won't be lifting provides maximum security
