

# Concrete Work – The Hazards of Working with Concrete Meeting Kit

## WHAT'S AT STAKE

Working with concrete might seem straightforward, but it comes with hidden risks that can seriously impact your health and safety. Concrete is heavy, abrasive, and often mixed with chemicals that can cause burns, skin irritation, or respiratory problems. Without proper care and protection, workers face injuries like chemical burns, muscle strains from lifting heavy materials, and long-term issues from inhaling dust. These hazards don't just threaten your wellbeing on the job they can affect your quality of life for years to come. Knowing the risks and protecting yourself helps you finish strong, injury-free, and ready for the next day's work.

## WHAT'S THE DANGER

Concrete work exposes you to serious hazards like chemical burns from wet cement, heavy lifting injuries, and harmful dust inhalation. These dangers can cause immediate injuries and long-term health problems if proper precautions aren't taken on every job.

- **Chemical Burns:** Wet concrete contains alkaline substances that can cause painful skin burns and irritation if it stays on your skin too long.
- **Muscle Strains and Sprains:** Handling heavy concrete bags, mixing equipment, or wet concrete can strain your back, shoulders, and knees.
- **Respiratory Issues:** Concrete dust contains silica, which can cause serious lung diseases like silicosis if inhaled repeatedly over time.
- **Eye Injuries:** Splashing wet concrete or dust can damage your eyes, leading to irritation or permanent injury.
- **Slips and Trips:** Wet surfaces and cluttered work areas increase the risk of falls.

### Real World Scenario

A worker mixed concrete without wearing gloves or long sleeves. After several hours, he developed severe skin irritation and burns from constant contact with wet cement. This forced him to take weeks off for treatment, delaying the project and causing unnecessary pain.

## HOW TO PROTECT YOURSELF

Concrete work doesn't have to be dangerous if you follow smart, consistent safety practices. The right PPE, good planning, and proper techniques can prevent most of

the injuries common on these jobs.

## **Wear the Right PPE**

Concrete is caustic and can burn skin on contact. Always wear:

- Alkali-resistant gloves
- Long sleeves and pants
- Waterproof boots
- Safety goggles or face shields to protect your eyes from splashes
- A respirator or dust mask when mixing or cutting dry concrete

**Use Safe Lifting Techniques** – Lifting concrete bags, forms, and tools can strain your back if done incorrectly.

- Bend at the knees, not the waist.
- Keep the load close to your body.
- Team-lift heavy or awkward items.

Example: When lifting a bag of cement, squat down with a straight back, grip it firmly, and lift using your legs, not your spine.

**Control Dust Exposure** – Concrete dust is no joke; it contains silica, which can permanently damage your lungs.

- Wet down dry concrete before cutting or mixing.
- Use tools with dust collection systems or vacuums.
- Work in well-ventilated areas whenever possible.

**Rinse Off Immediately if Exposed** – If concrete or wet cement touches your skin, don't wait.

- Rinse the area thoroughly with clean water right away.
- Remove any contaminated clothing.
- Don't let it "dry" this makes the burn worse.

**Maintain a Clean Work Area** – Keep walkways and work zones free of tripping hazards like hoses, tools, or spilled concrete.

- Clean as you go to prevent slips on wet surfaces.
- Store tools and bags in designated areas.

**Be Ready for Emergencies** – Accidents happen—even with good prep.

- Know where the nearest eyewash station and first aid kit are.
- Report burns, skin reactions, or dust exposure immediately to your supervisor.

**Never "wait it out"**—early treatment prevents complications.

## **FINAL WORD**

Concrete is tough—but it's not tougher than you. The real strength on the job comes from working smart and staying protected. Don't skip PPE or take shortcuts. A few minutes of prevention can save you weeks of recovery. Stay sharp. Stay safe.
