Identify, Evaluate and Control Stats and Facts

FACTS

These safety violations lead to a significant number of non-fatal and fatal workplace injuries:

- 1. Inadequate fall protection
- 2. Unsafe scaffolding
- 3. Inadequate hazard communication standards
- 4. Unsafe ladders
- 5. Inadequate respiratory protection
- 6. Powered industrial truck safety violations
- 7. Failure to control hazardous energy (lockout or tagout violations)
- 8. Inadequate fall protection training
- 9. Inadequate machine quarding and unsafe machinery
- 10. Inadequate face and eye protection

STATS

- According to the U.S. Bureau of Labor Statistics' 2019 data, the most common workplace injuries categories, from most to least common are:
- Sprains, tears, and strains (approximately 35 incidents per 10,000 full-time workers)
- Pain and soreness (approximately 18 incidents per 10,000 full-time workers)
- Lacerations, punctures, and cuts (approximately 9 incidents per 10,000 full-time workers)
- Contusions and bruises (approximately 9 incidents per 10,000 full-time workers)
- Fractures (approximately 8 incidents per 10,000 full-time workers)
- According to the National Safety Council, in the United States, a worker is injured on the job every seven seconds. This equates to:
 - ∘ 540 work injuries per hour
 - ∘ 12,900 work injuries per day
 - ∘ 90,400 work injuries per week
 - ∘ 7 million work injuries per year
