

# Longshoring Safety Meeting Kit

## WHAT'S AT STAKE

Longshore workers are individuals employed in maritime industries, such as loading and unloading cargo on ships, handling containers, and operating machinery in ports and dockyards. Maintaining safety is of paramount importance to protect the well-being of these workers and prevent accidents and injuries.

## WHAT'S THE DANGER

### LONGSHORING OPERATIONS POSE POTENTIAL DANGERS AND HAZARDS TO WORKERS

Longshoring requires the use of heavy equipment and machinery, such as cranes, forklifts, and cargo handling equipment. Workers can be at risk of being struck, caught, or crushed by moving machinery, leading to severe injuries or even fatalities.

Longshore workers may be required to work at heights, such as on ship decks, containers, or elevated platforms. Without proper fall protection systems, workers are at risk of falling from heights, which can result in serious injuries or death. Slippery surfaces, uneven terrain, and adverse weather conditions can further increase the risk of falls.

Longshore workers are responsible for loading and unloading cargo, including containers, bulk materials, and heavy items. Improperly secured or unbalanced loads can shift or fall, posing a significant risk to workers in the vicinity.

Longshoring operations often involve handling hazardous materials, such as chemicals, flammable substances, and toxic materials. Without appropriate safety protocols, workers face the risk of chemical burns, inhalation of toxic fumes, or contamination, which can lead to acute or chronic health issues.

Certain areas within ships, containers, or storage facilities may be confined spaces that present specific dangers. Lack of proper ventilation, and rescue procedures increase the likelihood of accidents in confined spaces.

Longshoring operations are carried out in extreme temperatures, high winds, rain, and rough seas. These conditions affect the overall safety of the work environment.

Longshore workers may be exposed to various ergonomic hazards due to repetitive tasks, heavy lifting, awkward postures, and prolonged standing. These factors can contribute to musculoskeletal disorders, including back injuries, strains, sprains, and chronic pain.

Longshoring operations generate prolonged exposure to excessive noise levels can lead to hearing loss and other auditory problems. Vibrations from equipment can cause hand-arm vibration syndrome, leading to circulation problems and nerve damage.

Longshore workers interact with electrical systems and equipment, such as power lines, electrical panels, and machinery. Improper handling of electrical components or failure to follow safety protocols can result in electric shocks, burns, or electrocution.

Longshore operations often involve demanding work schedules, long shifts, and irregular working hours. Fatigue and stress can impair concentration, decision-making abilities, and physical coordination, increasing the likelihood of accidents.

## HOW TO PROTECT YOURSELF

### KEY MEASURES TO ENSURE WORKER SAFETY IN LONG SHORING OPERATIONS

**Receive Proper Training:** Obtain thorough training on long-shoring operations, including equipment operation, cargo handling, and safety protocols. Familiarize yourself with the specific hazards associated with your job and learn how to identify and mitigate risks effectively. Stay updated on any new training requirements or industry best practices.

**Wear Personal Protective Equipment (PPE):** Always wear the appropriate personal protective equipment for the tasks you are performing. This may include hard hats, safety goggles, high-visibility vests, steel-toed boots, gloves, and respiratory protection. Use the designated PPE correctly and ensure it is in good condition.

**Follow Safe Work Practices:** Adhere to safe work practices and standard operating procedures established for long-shoring operations. This includes using proper lifting techniques, securing loads correctly, maintaining clear communication with co-workers, and following established safety protocols for specific tasks. Avoid taking shortcuts or engaging in unsafe behaviors.

**Utilize Fall Protection Systems:** If working at heights or in areas where falls are a risk, use fall protection equipment such as safety harnesses, lanyards, and lifelines. Ensure that the equipment is properly fitted, regularly inspected, and in good working condition. Follow proper procedures for securing and anchoring fall protection systems.

**Secure Loads and Prevent Falling Objects:** Ensure that cargo and equipment are properly secured to prevent shifting or falling during transportation or handling. Use appropriate rigging equipment, such as slings and chains, to secure loads. Stay clear of suspended loads and maintain a safe distance from areas where objects may fall.

**Practice Safe Material Handling:** When manually handling cargo or equipment, use proper lifting techniques to minimize the risk of strains, sprains, and other musculoskeletal injuries. Bend at the knees, lift with your legs, and avoid twisting or overexertion. Seek assistance or use mechanical aids when dealing with heavy or awkward loads.

**Be Aware of Confined Spaces:** If entering confined spaces, ensure that proper protocols are followed. This includes adequate ventilation, testing for hazardous gases, and using appropriate personal protective equipment. Never enter a confined space without proper training, equipment, and an effective communication and rescue plan.

**Report Hazards and Incidents:** Be proactive in identifying and reporting potential hazards, unsafe conditions, or near misses. Report any incidents, injuries, or safety concerns to your supervisor immediately.

**Prioritize Communication:** Maintain clear and effective communication with your co-workers, supervisors, and other personnel involved in long-shoring operations. Discuss job assignments, safety concerns, and potential hazards before starting any task. Use hand signals, radios, or other communication devices to ensure effective communication, especially in noisy or busy environments.

**Prioritize Physical and Mental Well-being:** Take care of your overall well-being to enhance your ability to work safely. Get sufficient rest, eat balanced meals, and stay hydrated. Be mindful of signs of fatigue, and stress.

## **FINAL WORD**

Prioritizing long-shoring safety not only minimizes risks and ensures compliance but also enhances productivity, sustains a positive reputation, and fosters a healthier and more efficient work environment for all involved in longshore operations.
