

Occupational Vibration Exposure Infographic

VIBRATION MONITORING

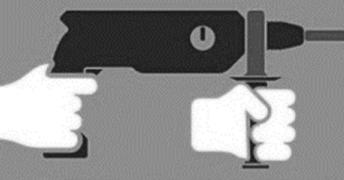

According to the HSE, almost **2 MILLION PEOPLE** per year are at risk of serious health problems caused by using equipment prone to vibration.

DID YOU KNOW

Any business that has identified vibration as a risk should be working below the recommended Exposure Action Value (EAV) of 2.5 m/s A(8)

2 The number of years inbetween vibration risk assessments. Depending on the level of risk identified, it could be less.

 Power tools and other handheld equipment need regular testing.

 We can help identify which employees need regular health surveillance.

The cost of non-compliance outweighs the cost of regular vibration risk assessments.

Construction and manufacturing industries particularly at risks.
