## What do we know about drug overdose deaths at work?

Most overdose deaths at work were from **opioids**  
*Opioids are drugs commonly used to reduce pain and can be prescribed or used without a medical reason*

Workplace factors can influence the use of prescriptions and other substances  
Examples: opioids prescribed for work-related back pain, and workers using substances to deal with work-related stress

## What don't we know about drug overdose deaths at work?

- The circumstances for substance use
- If the drug use was associated with work injury and pain

## Employers: You can take steps to prevent worker drug overdose

- Identify and remove workplace dangers
- Protect workers who do physically demanding jobs from getting injured
- Educate yourself on how you can support a worker with a substance use disorder
- Educate employees on risks for substance use and overdose prevention
- Consider implementing a program to make **naloxone** available in the workplace in the event of an opioid overdose  
*Naloxone is a life-saving medication that can reverse the effects of an opioid overdose*

**Large Employers:**  
Provide training and encourage use of an employee assistance program, health plan, and other resources for treatment of substance use disorders

**Small Employers:**  
Work with your local health department for resources in your community
