

# Why Every Company in North America Needs to Embrace Online Learning for Employee Training

Across North America, organizations are facing an unprecedented need to upskill and reskill their workforces—quickly, affordably, and without disrupting daily operations. Whether it's equipping thousands of employees with new data analytics skills or ensuring every worker stays compliant with health and safety requirements, one thing has become abundantly clear: traditional classroom training can no longer keep up with modern business demands.

The workforce is evolving, geographic footprints are expanding, and the pressure to adopt new technologies is mounting. For OHS managers and HR directors responsible for building competent, compliant teams, online learning is no longer just a convenient option—it is an operational necessity.

## Large-Scale Learning at Speed and Low Cost

A familiar scenario is playing out in boardrooms and virtual meetings across North America. Leadership wants thousands of employees—often spread across multiple states, provinces, or countries—trained on new tools or safety programs within months, not years. They want it done quickly, at scale, with minimal disruption to operations and at the lowest cost possible.

This expectation is nearly impossible with classroom training. Booking travel, securing instructors, and coordinating schedules for hundreds or thousands of employees creates bottlenecks and expenses that spiral out of control.

Online learning removes these barriers entirely. It enables:

- Fast deployment across multiple locations.
- Cost-effective delivery at scale.
- Minimal disruption to work schedules.
- Training that accommodates different time zones and work environments.

Digital learning is no longer a luxury—it's a practical response to modern business realities.

## Breaking Down Geographic and Time Barriers

Instructor-led online training (synchronous learning) addresses one of the most significant obstacles facing OHS and HR teams: distance. Employees can attend the

same session regardless of where they live or work. No travel budgets. No facility rentals. No lost workdays.

Even better, self-paced training goes one step further by eliminating the remaining barriers of time and scheduling. Employees can log in anytime—whether after a shift, during downtime, or even on the road. This model is especially valuable for safety training, where learning needs to be accessible but not disruptive.

## **The Four-Region Safety Rollout**

When NorthStar Logistics rolled out a new hazard communication program across its four North American regions, the HR director initially tried coordinating live webinars for all locations. Time zones created chaos—what was 9 a.m. for Toronto was 6 a.m. for Vancouver and midnight for a team in Manila. Switching to self-paced training allowed all 2,500 employees to complete the course within 15 days, with zero scheduling conflicts and no overtime spending.

## **Reducing Information Overload and Increasing Retention**

Complex topics—like analytics, ergonomics, or incident investigation—are difficult to teach effectively in a compressed multi-day classroom format. Employees are bombarded with information and left with little time to process, review, or apply what they've learned.

Online learning solves that by spacing learning over weeks instead of days. Learners absorb concepts gradually, revisit content as needed, and can apply new skills before moving forward.

This spaced-learning structure drastically increases:

- Long-term knowledge retention
- Employee confidence
- Quality of skill development
- Training effectiveness across diverse skill levels

And importantly, employees do not feel overwhelmed by the “firehose effect” typical of traditional training.

## **Tracking Progress, Ensuring Accountability**

HR directors and OHS managers are often concerned about one main question:

“How do we make sure people actually complete their training?”

Modern corporate learning platforms provide deep visibility through:

- Progress tracking
- Engagement analytics
- Automated reminders
- Performance reporting
- Flags for learners who are behind or struggling

This allows training managers to intervene early, instead of discovering non-compliance months later. These tools make self-paced learning not only efficient, but highly trackable and audit-ready.

## **Catching a Compliance Gap Before It Became a Liability**

At MapleTech Industries, an OHS audit revealed that several machine operators had not completed their annual lockout/tagout refresher. In previous years, this would have

led to penalties. But their new learning platform flagged the non-completions early. The system sent automated reminders, and supervisors followed up immediately. All workers completed the training within 48 hours—closing a compliance gap that previously would have gone unnoticed.

## **Is Online Learning as Effective as Classroom Training? Yes—More So.**

A persistent myth is that in-person training is inherently superior. In reality, the opposite is often true in professional environments.

Online learning is more effective because:

- 1. Learners control the pace.**

Fast learners can progress quickly, while others can review challenging concepts without slowing down the entire group.

- 2. Learning happens over time, not in a compressed window.**

This leads to significantly higher retention—especially for complex or technical topics.

- 3. It supports different learning styles.**

Videos, interactive modules, quizzes, simulations, and job-specific scenarios can all be integrated seamlessly.

Most HR and OHS leaders who doubt online learning are not questioning the content—they’re concerned about learner engagement. But with modern LMS platforms offering engagement tools, reminders, and real-time monitoring, those challenges are now manageable and solvable.

## **The Future of Employee Training Is Already Here**

Online learning delivers speed, scale, flexibility, and accountability—everything North American organizations need to stay competitive and compliant. For HR directors and OHS managers, it creates a more effective, measurably stronger training ecosystem where employees learn better, retain more, and stay safer.

This isn’t simply a digital transformation trend—it’s a strategic advantage. And the organizations that fully embrace online learning will be the ones best positioned for long-term success.
